

THE FIRST NAME IN SILAGE QUALITY

There's an Ag-Bag model for the smallest to the largest dairy operations.

Can you afford to lose 15% to 30% of your high value feed to spoilage and shrinkage?

Ag-Bag provides a way to reduce costly shrinkage and to give your cows the kind of nutritious and palatable silage they prefer. The Ag-Bag system is proven to be the ideal environment for preserving high quality, highly digestible feed that raises production and herd health levels.

Miller Ag-Bag continues to lead the industry with innovation and modern manufacturing methods. Our commitment is evident with introduction of the new X1114 Professional Ag-Bagger, the largest, highest capacity, most productive silage bagger available today.

Look to Ag-Bag for the economics of lower cost storage, significantly reduced storage losses, a convenient way to segregate feed types, and industry-leading resale value.

New X1114 Professional 14' Ag-Bagger™ packs 25% more than in a 12' bag.
